

Bottom Suction Pump

The new A.Y. McDonald Bottom Suction-Cistern Pump is a durable product that delivers high performance for clear water, gray water, or filtered effluent service operations. Its unique bottom suction design provides maximum drawdown without decreasing the pump’s overall longevity.

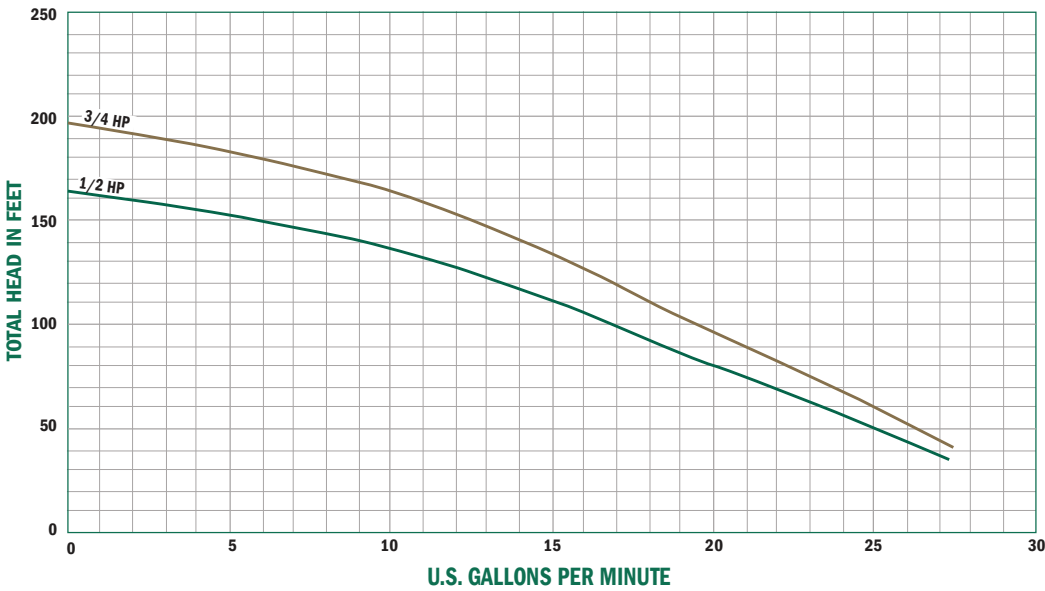

The Bottom Suction-Cistern pump can pass solids up to 1/8”. The bottom suction pumps are intended for use in cistern or tank applications. These pumps are well suited to meet agricultural, residential, and commercial installation needs

Features:

- Bottom suction
- Quiet operation
- Corrosion resistant
- Available in 115V & 230V
- CSA listed

Applications:

- Dirty water applications
- Rain water collection
- Pond applications
- Cisterns for both clean & dirty water
- Potable water
- Vertical or Horizontal installation
